
Bright Coffee Shop sales dataset
Map the data flow: source —processing — Databricks —analysis — presentation
List questions: Which products earn the most? When are sales highest?
2. Process data in Databricks
Convert Excel to CSV and loadit
Data inspection
Create time buckets: 30minutes or 3 hours
Which products sell the most units?
Which products generate the most revenue?
Which days generate the most revenue?
What times of day generate the most revenue?
Calculate total_amount =unit_price × transaction_qty
Use SQL to group sales by product and time
• Columns: Are the expected columns present?
• Dates and times: Do transaction date and transaction time look consistent?
• Prices: Does unit price use decimal points, commas, or both?
• Missing values: Are any cells blank or NULL?
• Quantities: Are any transaction_qty values zero or negative?
3. Analyse in ExcelExport processed dataBuild pivot tables and chartsfor revenue, quantity and peaktimes
